

XGATE WIRELESS SERVICE

"High Speed Satellite Data Services"

The XGate Wireless Data Service provides convenient and cost-effective access to Internet e-mail via your Iridium, Globalstar or Inmarsat satellite phone. XGate's data compression is the fastest wireless access to the Internet and delivers 10 to 15 times the speed possible without compression thus saving users time and money.

KEY BENEFITS

- **Personal e-mail address.** User selected account user name and password.
- **Keep your current e-mail software.** Works with any e-mail client program which supports standard POP/SMTP including Microsoft Outlook Express & Microsoft Outlook.
- **Attachments.** Full support for attachments and HTML messaging.
- **Size Filtering.** Server side filtering which can be controlled by the user. Users can determine the maximum size of attachments they will receive via satellite phone. They can also specify whether HTML attachments are to be sent them via satellite phone. Messages not sent via satellite connection are stored on the server for later perusal via the web.
- **Client side filtering.** Allows the selective download of messages.
- **Server side virus removal** support which scans every e-mail sent or received for viruses and unwanted junk mail before it's delivered to you.
- **Same e-mail address when at home or on your boat.** Software works seamlessly with satellite phone communication as well as through conventional Internet channels such as dial-up and LAN adapters. The user does not need to change e-mail programs when ashore.
- **Extremely simple user interface.** Users are up and running and doing e-mail through satellite phones in minutes.
- **Technical support** via voice or e-mail.
- **Webmail access** from any internet connected PC to the user's mail box.
- **SMS support.** The mail server sends e-mail messages to the user's satellite phone via the free short messaging service (SMS) informing the user when mail has arrived. This feature prevents users from having to waste valuable air time to check and see if e-mail is available.
- **Easy dial-up data support** for Globalstar users (for small additional fee). This feature allows user to access e-mail in countries that do not have direct-data access networks.
- **OPTIONAL SERVICE: XWeb Browser (\$8 per month).** Speeds web download up to 10 times through web content compression and user selected limits on graphics downloading. Pop-up blocker included.
